ranvirchhina25@gmail.com · 778-875-4769 · linkedin.com/in/chhinaranvir · Vancouver, BC, Canada

Full-stack software engineer with 4+ years building scalable APIs, microservices, and cloud-integrated platforms. Experienced with TypeScript, React, Node.js, GraphQL, and relational databases across distributed production systems. Skilled at end-to-end feature development, cross-functional collaboration, and delivering well-tested, extensible software.

## EXPERIENCE

**Software Engineer II**

May 2024 – Jan 2025

Electronic Arts · Vancouver, BC

- Migrated a legacy JavaScript automation infrastructure to TypeScript, raising end-to-end test reliability from ~75% to 95%+ without disrupting active release cycles.
- Managed 100+ on-prem virtual machines via vSphere and Ansible, supporting CI pipeline runs exceeding 200 daily builds; designed Ansible playbooks for automated provisioning and configuration drift remediation.
- Built an internal documentation site and authored comprehensive service docs to accelerate onboarding and reduce knowledge silos across the team.

**Software Engineer I**

Sep 2022 – May 2024

Electronic Arts · Vancouver, BC

- Designed and developed a gRPC-based microservice enabling unit, narrow integration, and end-to-end testing for new platform features across Steam, Epic Games, and Xbox partner integrations.
- Led migration from Jenkins to GitLab CI/CD, reducing pipeline configuration overhead by ~40% and enabling parallel stage execution across test environments.
- Built and maintained RESTful API integrations for partner workflows; contributed to cross-functional design reviews and technical planning across multiple product squads.

**Quality Engineer I (Contract via Teksystems)**

Feb 2021 – Sep 2022

Electronic Arts · Vancouver, BC

- Extended a Node.js testing framework for end-to-end and narrow integration tests; integrated third-party APIs to validate cross-application user flows.
- Expanded React/Jest test coverage by mocking components and custom hooks; authored technical design documents and supported sprint planning alongside product and design stakeholders.

**Software Engineer I (Contract via Infostar)**

Apr 2019 – Jul 2020

Facebook · Seattle, WA

- Built Python/Appium automation pipelines for cross-platform video benchmarking on Android and iOS across Facebook, Instagram, Snapchat, YouTube, and cloud storage apps.
- Wrote a Python/FFmpeg pipeline to process video artifacts stored in S3, detecting user interactions with millisecond precision; results surfaced via cron-scheduled reports on EC2.

## PROJECTS

**Lexolo — AI Language Learning iOS App**

Apr 2025 – Present

- Architected a TypeScript/Node.js backend with distinct microservices for authentication, user progress analytics, and AI-driven story generation; exposed a RESTful API consumed by a SwiftUI iOS frontend covering onboarding, Q&A formats, and progress tracking.
- Integrated Groq LLM inference APIs with structured JSON schema validation and retry logic; used GCP Text-to-Speech for audio delivery and Supabase (PostgreSQL) as the managed relational backend — demonstrating full end-to-end feature ownership.

## EDUCATION

**Bachelor of Arts — University of Washington**

2017 – 2022

Seattle, WA

## SKILLS

- Languages:** TypeScript, JavaScript, Python, Go, Ruby, Swift, C++
- Frontend:** React, Redux, SwiftUI, Material UI, Component-driven UI development
- Backend & APIs:** Node.js, Express, gRPC, RESTful APIs, GraphQL, Microservices Architecture, Supabase (PostgreSQL), MySQL
- Cloud & Infra:** AWS (S3, EC2, Lambda concepts), GCP (TTS API), Ansible, vSphere, GitLab CI/CD, Jenkins
- AI / ML & Data:** LLM Inference APIs (Groq), Prompt Engineering, JSON Schema Validation, ETL Pipelines, FFmpeg, Cron Orchestration
- Testing:** Jest, Appium, Selenium, End-to-End & Integration Testing, TDD, Release Quality Monitoring
