

Ranvir Singh Chhina

ranvirchhina25@gmail.com · [ranvir.work](#) · Vancouver, BC, Canada

Full-stack software engineer with 4+ years building internal tooling, APIs, and scalable backend systems. Proficient in TypeScript/JavaScript, Python, React, Node.js, RESTful API design, and AWS. Experienced with Docker, CI/CD pipelines, Infrastructure as Code, and cross-functional collaboration.

EXPERIENCE

Founder & Engineer Lexolo	Apr 2025 - Present
- Architecting an AI-driven iOS language learning app with a TypeScript/Node.js microservice backend on Fly.IO for auth, analytics, and content generation. - Integrated Supabase (PostgreSQL), Google Text-to-Speech, and Groq LLM APIs; built a semantic word/phrase storage system and leaderboard; designed ~20 screens in Figma.	
Software Engineer II Electronic Arts · Vancouver, BC	May 2024 - Jan 2025
- Migrated legacy JavaScript automation infrastructure to TypeScript, raising end-to-end test reliability from ~75% to 96%+. - Managed 100+ on-prem VMs via vSphere and Ansible; authored IaC playbooks across 200+ daily CI builds. - Authored service documentation and internal runbooks; championed code review practices across the team.	
Software Engineer I Electronic Arts · Vancouver, BC	Sep 2022 - May 2024
- Built a gRPC microservice for unit, integration, and E2E testing across Steam, Epic Games, and Xbox integrations. - Led Jenkins to GitLab CI/CD migration, reducing pipeline overhead by ~40% and enabling parallel stage execution. - Designed and documented RESTful API contracts for internal and external stakeholders across multiple teams.	
Quality Engineer I (Contract via Teksystems) Electronic Arts · Vancouver, BC	Feb 2021 - Sep 2022
- Built and maintained a Node.js/TypeScript testing framework for E2E and integration tests; expanded React/Jest coverage. - Translated engineering needs into software solutions; authored technical design docs and supported sprint planning.	
Software Engineer I (Contract via Infostar) Facebook · Seattle, WA	Apr 2019 - Jul 2020
- Built a Python/FFmpeg pipeline to process video artifacts in AWS S3, detecting user interactions with millisecond precision. - Automated video benchmarking across Android and iOS using Appium; delivered weekly regression updates.	

PROJECTS

Webcam Touch-Typing Coach	<i>Python, MediaPipe, OpenCV, pynput, NumPy</i>
- Built a real-time CV pipeline that tracks hand landmarks via MediaPipe, maps keystrokes to the correct fingertip using a calibrated keyboard grid, and flags wrong-finger presses. - Split into clean modules (keymap, calibration, attribution, coaching); added a no-webcam test suite and an optional scikit-learn path for personalised scoring.	
Personal Finance REST API	<i>Node.js, Express, PostgreSQL, Docker, Jest, JWT</i>
- Designed a Node.js/Express REST API with JWT auth, category tagging, and monthly rolup reports backed by PostgreSQL. - Containerized with Docker Compose; wrote Jest integration tests covering all endpoints with seeded test data.	

EDUCATION

Bachelor of Arts - University of Washington, Seattle	2022
---	-------------

SKILLS

Languages: TypeScript, JavaScript, Python, C++
Frontend & Backend: React, Node.js, Express, RESTful API Design
AWS & Cloud: Lambda, S3, EC2, Docker, Kubernetes
Infra & CI/CD: Ansible, GitHub Actions, GitLab CI/CD, Jenkins
